Job Title: Intermediate Java Developer

Summary

Telepin Software is the winner of the Ottawa Business Journal's award for the Fastest Growing Company for 2009 and the Ottawa Center for Research and Innovation's awards for the Fastest Growing Startup for 2010 and Most Promising Startup for 2010. We are a leading provider of mobile transaction infrastructure software for mobile operators around the world. Our customer base includes 20 successful deployments with tier-one operators in the Middle East, Africa, and the Americas, for a total active user base of 71.5 million, on 275,000 merchant networks.

Telepin is looking for an Intermediate Java Developer to be part of our Ottawa based team. This position is responsible for assisting in the design and development of our next generation product as well as assisting in the deployment and maintenance of our current product.

This job may require travel and customer interaction so excellent communication skills are required and the applicant must be a Canadian citizen.

Necessary Skills/Experience:

- 4+ years of Java development experience
- Experience working with high performance real-time applications
- Good knowledge of multi-threaded Java applications
- Developing in a Solaris environment
- Oracle database and SQL exposure
- Experience with Telecom related software (SS7 and SIGTRAN an asset)
- iPhone, Blackberry and Android development experience
- Good working knowledge of Eclipse
- Self motivated with the ability to work efficiently to meet deadlines
- Resilience and ability to cope effectively under pressure

Assets

- Experience with mobile payment applications
- Experience with XML, JAXB and SOAP
- Knowledge of GWT or other AJAX technologies
